

Exercise

Consider the following simplex tableau wherein a Max problem is being solved. The following conditions stated below are independent of each other and they all refer to the simplex tableau. For each condition, clearly state the range of values the relevant parameters A to G can take so that the condition is true. Include a brief justification for the indicated range of values.

- The first iteration in Phase II can start.
- You can conclude that the LP is unbounded.
- The tableau is optimal and there is an alternative optimum solution.
- x_6 is the entering variable and x_3 is the leaving variable.
- x_7 is the entering variable but when x_7 enters the solution, z remains unchanged.

	x_1	x_2	x_3	x_4	x_5	x_6	x_7	Solution
	0	G	0	A	3	B	C	z
x_2	0	1	0	D	1	0	3	E
x_3	0	0	1	-2	2	F	-1	2
x_1	1	0	0	0	-1	2	1	3
